The African BushBike

is made for demanding riders and tough terrain. Equipped with a powerful motor, disc brakes, and full suspension, it handles steep hills, heavy loads, and long distances with ease. Built for rural delivery, conservation work, and off-grid transport — this is our most capable model yet

Our Electric Utility Bikes are built for Africa.

Whether you're crossing farmland, navigating remote villages, or hauling tools through the bush, the BushBike delivers clean, reliable mobility every time. Designed in Namibia and made for the continent, these rugged electric bikes are built tough, ride quiet, and go the distance — on-road or off.

The dual battery system

extends your range up to 80 km, perfect for long routes or full-day use in remote areas. With a standardized design, batteries can be swapped in seconds — minimizing downtime for riders and fleets. Both models are solar-charge compatible, enabling clean, off-grid recharging for true energy independence.

Use cases

From farm work to game patrols, tourism rentals to last-mile delivery — the BushBike is built to serve. With customizable configurations and solar charging compatibility, it's the go-to mobility tool for farmers, rangers, lodges, health workers, commuters and entrepreneurs across Africa. No noise, no fuel, no limits.

Tourism

Offer guests an unforgettable, eco-friendly experience. Whether at a lodge, guest farm, or backpackers' retreat, bush.bike adds value with guided or solo e-bike excursions. Our free rental partnership model means no cost to you, and we handle service and logistics while you offer clean adventure.
